

log-file output in separate files

Source: <http://linux.derkeiler.com/Mailing-Lists/RedHat/2004-02/1005.html>

I need to store excerpts of logfiles in separate files from remote server.

Usually I use the commands:

```
grep -n "expression" /var/log/logfile
```

and

```
tail --lines=x /var/log/logfile
```

...for getting output

Is there a way to give these commands and then the output is automatically stored in a new file?
