Dear all,

I tried to fdisk /dev/hdc, which a new Samsung SP1203N/DOM HDD.

The message shows "Unable to open /dev/hdc.

Command "mkfs.ext3 -c /dev/hdc" gives "bad blocks count"

However, I can do fdisk to this new HDD under DOS.

What's the problem? Does redhat9.0 can not support Samsung 1203N/DOM?

Any suggestions, please!

Thanks.

Z. He
