Hello

OS: Linux RedHat Enterprise WS 3

My hostsfile is beeing corruppted when I open "redhat--config-network" and click on "save". It just deletes some of the lines in /etc/hosts and adds some ##### lines.

I use to modify the hosts file in a text editor, however, I also make some configurations in the network configuration tool. No entry should be lost when working with the graphical tool.

Does someone have a suggestion how to get rid of that problem?

Thanks!

Marcel

Below you can see the first part of my hostsfile

#

-----  
-----  
127.0.0.1 localhost localhost.localdomain # Do not change this  
line!!!

#

#

-----  
-----  
149.236.99.1 ASP\_ST2 # Second Ethernet Card  
149.236.99.99 spect av300 av400 av500 av600 av700 av800 av900 # EthernetCard  
on CCU (Console)

150.205.48.6 deliver # Address for delivering  
# Cut here before delivering. Do not change this line, used for script! #

#####

# File: /etc/hosts (Master file on CSWEB) #

# Version: 2003-11-11 MAF #

# Save old version as /etc/hosts.XX.old #
