Hello!

I have RH9 box. When i use RH9 kernel such as kernel-2.4.20-24.9 i have some slow operation on P4-1.6G

!!!

Such command:

```
sh# time rpm -qa
... [skip]
realšššš 0m31.020s
useršššš 0m9.340s
sysššššš 0m0.250s
```

Why?

When I use standard kernel from kernel.org 2.4.22 then that command:

```
sh# time rpm -qa
... [skip]
```

```
real    0m13.028s
user    0m1.050s
sys     0m0.270s
```

What happen?
