

RedHat: RH 9's openssl??

## RH 9's openssl??

**Source:** <http://linux.derkeiler.com/Mailing-Lists/RedHat/2004-05/0235.html>

To: [redhat-list@redhat.com](mailto:redhat-list@redhat.com)

This may be a stupid question but I have not been keeping up on things... I know there have been numerous vulnerabilities discovered in openssl-0.9.7x and it seems RH 9, even the latest update, is still openssl-0.9.7a...

I notice the minor version has changed (I think openssl-0.9.7a-20 is the latest update) but not the core version. Is there a reason Red Hat is lagging on this?

Is everyone rolling there own builds of openssl?

Thx,  
keg
