Hi Lars,

Many thanks for your helpful replies and sorry to bother you again with this, but I'm getting a bit exasperated! I've downloaded all 4 mgetty rpm's from the RedHat Network site and installed OK (mgetty doesn't seem to be included in my distro of RH9). I've looked at some of the documentation files (README.1st etc), but I can't find any simple, straightforward instructions as to how to get it working. Maybe I do need a GUI front end (which would presumably then show up on the 'Run Program' menu?) to enable me to get started, as I'm still a newbie to linux and too used to MS Windows! Any idea where I can get a good GUI for mgetty and/or what I should do next?

Many thanks again,

Andy
