My company has decided to embrace Microsoft and use Exchange. Exchange is the basis for the IP phone system, for better or worse. So, I am having some significant issues with evolution and the evolution connector for Redhat EL WS v.3. I get an evolution-exchange-storage crash (segmentation fault) when I try to enable the exchange connector. Using evolution-1.4.5-9, evolution-devel-1.4.5-9 and the only available evolution-connector-1.4.7-5 (that I can find at my subscribed rhn channels).

Any help would be great. If you need more info, I'll be happy to send it off

Thanks,

Bob Cooper
