Hello All,

Got a sticky problem here and need some assistance. Fresh install of ES 3.0 and is current with RHN updates. I have a intel 82865G vid card and a HP A4575A monitor. No matter what display res. I set it to it always defaults down to a 640x480 with a depth of 16 and I get a number of error's for the modes that it can use with the following error:

No mode of this name

any assistance would be appreciated.

Thanks,

Albert Smith
