To: "General Red Hat Linux discussion list" <redhat-list@redhat.com>

After installing RH ES 3, I found I did not have the sar and iostat commands. I installed `sysstat-5.0.5-5.rhel3` from the redhat network. This resolved this issue.

I wonder how I can compare my list of rpms, obtained with `rpm -q -a`, with the list of RH ES 3 rpms so I can see if I am missing other desirable filesets.

Thks in advance,

John Yard
