I've read Richard Keech's article (above) at <http://people.redhat.com/rkeech/howto-palm-and-rhl8.html> and tried in vain to sync my palm pilot (PalmOne Zire 31) with RedHat 9. Does anyone (including Richard himself?) please have any suggestions as to how to get this working – the (sync) software installation CD works brilliantly with Microsoft Windows 2K, so why does it have to be so damn difficult to perform this task with linux?!!

Any help to alleviate the frustration would be welcome,

Andy
