When my LINUX server boot up (CENTOS 3 UP4), I found errors on /var/log/messages. Does anyone know what it mean?

what is parport\_pc.o doing?

Thanks.

insmod:

/lib/modules/2.4.21-27.0.1.ELsmp/kernel/drivers/parport/parport\_pc.o:

init\_module: Device or resource busy

May 18 08:08:40 COMP1 insmod: Hint: insmod errors can be caused by incorrect module parameters, including invalid IO or IRQ parameters. You may find more information in syslog or the output from dmesg

May 18 08:08:40 COMP1 insmod:

/lib/modules/2.4.21-27.0.1.ELsmp/kernel/drivers/parport/parport\_pc.o:

insmod parport\_lowlevel failed
