To: General Red Hat Linux discussion list <[redhat-list@redhat.com](mailto:redhat-list@redhat.com)>

I have a RHEL 3.0 ES machine with PHP 4.3.2 installed from Red Hat. I am trying to recompile php to include MCAL and I get the following error on ./configure:

```
checking for GNU gettext support... yes
checking for bindtextdomain in -lintl... no
checking for bindtextdomain in -lc... no
configure: error: Unable to find required gettext library
```

Any help is greatly appreciated!

thanks,  
Darryl
