

RedHat: automatically disconnect idle console logins?

automatically disconnect idle console logins?

Source: <http://linux.derkeiler.com/Mailing-Lists/RedHat/2005-06/0490.html>

I know about the bash shell TMOUT variable.
This seems to expect that the user logged in will not
just unset that variable.

Is there any way to **enforce** that logins on the console will be
disconnected after a reasonable idle time (like 10 minutes?)

-Ben.
