Thanks that has worked fine.

Regards

Stop and restart the Name Server Cache Daemon (nscd). It may be caching the old data.

Subject: How to change from NIS to DNS without a reboot

I am currently changing all of our Redhat WS version 3 machines to DNS. I have edited the /etc/nsswitch.conf and /etc/resolv.conf to the settings we

RedHat: RE: How to change from NIS to DNS without a reboot

require. We have stopped and started the ypbind service but it is not changing over to use the DNS settings. The only way we can get it too pick up the new settings is to reboot the machine but unfortunately this is not an option with some current live servers. Is there a way of getting this change to be dynamic.

Regards
