-

partial progress
compared /etc/sysconfig/system-config-securitylevel
working box had --enabled
no network access box had --high
change to --enabled
now on to figure our why system-config-securitylevel editing tool does not work

John Ackley wrote:

two workstations, both running FC4 – in use for some time – no problems
one updated to FC5 – no problems
second updated but does not connect to network
otherwise acts normal

command "service network start" – reports "OK" – no error messages
"tcpdump" shows activity on network from other boxes
"netstat -nr" shows normal ip, gateway etc.
"ifconfig -a" shows normal parameters
ping to self works ok
ping to remote – "No route to host"
ping from remote – "No route to host"

then I try to turn off firewall with
system-config-securitylevel
returns error: "IndexError: list index out of range" line 371 of selinuxPage.py
(traceback 371,379,402 in securitylevel.py,240 in securitylevel.py)

where do I look next?
TIA
