Download the RHEL3U6 ISO images, extract them, and then just use rpm to upgrade using those rpm files.

even better than that...

unpack the RPMS from those install disks onto a network share of some kind.

then on your client machines edit /etc/sysconfig/rhn/sources to point up2date at that share (easiest done with some kind of local mount, using the 'dir' option). Don't forget to comment out the default line.

then try

```
up2date -u
```

it will take a while, but will definitely work.

regards

Stuart
