-

I know this is an RTFM question, but I haven't been able to locate an answer. I'm trying to sftp from one server to another. Where/How do I reset this user?

sftp testuser@servername

Received disconnect from 100.100.100.100: 2: Too many authentication failures for testuser

Couldn't read packet: Connection reset by peer

This may be pertinent info from the sshd_config:

ChallengeResponseAuthentication no

GSSAPIAuthentication yes

GSSAPICleanupCredentials yes

UsePAM yes

Any assistance or direction to documentation is appreciated.
