Dear,

I want to use "automount" between Linux system and Solaris 8 systems.
Between Solaris 8 systems, it works well.
And between some Solaris 8 systems and Linux system, it works well
and responds instantly.
But between the others and Linux system, it works but responds very late
and may take one or two minutes.
What configuration should I check?

The number of system is about 60.
Kernel Version : 2.4.21 Release: 37.EL
autofs version : 4.1.3 Release : 154

Please help me out ~~

Regards,

Astrum Semiconductor Inc.
