Kyle,

We use LDAP backend for our DNS, and our sendmail. It is great, particularly with all the nice GUIs coming out for LDAP servers.

It makes it really nice to add domains...

Kyle Johnson wrote:

I am looking to add a RHEL 4 BIND server. I would like to have others manage the server. They would like to use a GUI interface. `redhat-config-bind` or was it `system-config-bind` came with RHEL 3 but not 4.

What is recommend?

Thanks,

Kyle
