Dear all,

I have tried to google a fax viewer for linux similar to "Imaging for Windows" installed on Win98/W2K (in XP, there is another viewer program installed.); however, no satisfactory result is returned. Right now, I use "qfaxreader" (<http://qfaxreader.sourceforge.net/>) and it gives a good display for a fax file with tiff format, even a multi-page fax file. Nevertheless, qfaxreader cannot annotate on the fax file. Of course, we can make the annotation with gimp to a single page fax file; but it is inconvenient for a multi-page fax file. Please give me some guide or directions if available.

Thank you for any assistance in advance.

Michael
