Subject: echo command as in windows

In windows, you can do "set echo on" so that all commands in the bat file are listed. Is there a way to do the same in Linux.

To echo commands as they appear, have this as your first line in the script:

```
#!/bin/bash -v
```

If you want to see the values of variables at any point in time during execution, have this:

```
#!/bin/bash -x
```

Michael
