Hi, I've a problem trying to make a Partition Image.  
I've a Red Hat EL 4 / HP ML150 – 2 HD Maxtor Serial ATA – 1 Gb RAM  
I test differents software but anyone recognize the HD, Tested Gparted  
/Partimage / QTParted. I try other distros like Knoppix 3.9 and Ubuntu 5.10.  
Could someone give me a clue ?

What tools are you using ? What problem do you see ?

Why would anyone bother to help you if you don't give us any clue to what  
is happening, what software you're using or what you already looked for ?

Kind regards,
