Run "ethtool eth1" and look at the settings. Is the network card running at half duplex? Try setting it, and everything else on the LAN, to full duplex. Read the man page on ethtool.

Subject: RE:COLLISIONS

Hi ,

I am getting a collision on my my eth1 which is connected to my lan . when i do an ifconfig what could be the problem is it the NIC or the LAN cause i do not have ip's on my network that are conflicting. how do i troubleshoot this problem

RE: COLLISIONS

I probably wouldn't worry about "a collision" as in one, but if you mean many and its still incrementing, you may want to look at one side set to full duplex w/ the other set to half, bad cable, to long a run...
