Can anyone share how they get updates for their test environment(non-production) systems running RHEL ES or AS?

You may want to look at a project of mine. It's called Yam and you can find it at:

<http://dag.wieers.com/home-made/yam/>

Now, you may have to look into the legal matter of doing this. It's not because you can do this it is legal. (IANAL) If you have sufficient entitlements there's never problem. Some companies have agreements with Red Hat so that they do not need entitlements for test, support or integration purposes.

If your company is in a position where it would make sense, you can always talk to your Red Hat representative to ask them about this, especially if there's a mutual benefit.

Kind regards,
