I've installed the RHEL mysql rpms using up2date and for some reason there's no service start script in /etc/init.d and running 'service mysql(d) start' complains about 'unrecognized service'. I've never seen this with RH rpms before, is there something I'm missing?

Which rpms did you install? Did you install mysql-server?

```
[ewilts@pe400 ~]$ rpm -qa | grep -i mysql
MySQL-python-1.0.0-1.RHEL4.1
mysql-devel-4.1.20-1.RHEL4.1
perl-DBD-MySQL-2.9004-3.1
mysqlclient10-3.23.58-4.RHEL4.1
libdbi-dbd-mysql-0.6.5-10.RHEL4.1
mysql-4.1.20-1.RHEL4.1
php-mysql-4.3.9-3.12
mysql-server-4.1.20-1.RHEL4.1 <-----
```
