So when a guy writes to ask about how to enable root login from telnet, can't someone just say "I hope you know that's not as secure as ssh -- but here's how you enable that ?

That's exactly what I did. Look at this:

<https://www.redhat.com/archives/redhat-list/2006-August/msg00216.html>

If you read whole thread you'll see that the one who asked about how to enable root login via telnet is not the same guy who started the flame :-)

Greetings
