Dear All,

I am having postfix + dovecot mail server in my CentOS 4.4 on my office. I need to config this server to copy all outgoing and incoming mails to or from server to accounts (all mail going out and coming through mail server accounts) called log@xxxxxxx

1. Is it possible to do this in postfix?
2. Please give me the necessary config parameters to do this?
3. In Sendmail can I do this? If yes, details?
