

Proper way to change the rotation of apache logs?

Source: <http://linux.derkeiler.com/Mailing-Lists/RedHat/2006-10/msg00230.html>

I would like to adjust the amount of space each apache log can take up and how many copies are saved. According to RH in this kbase article http://kbase.redhat.com/faq/FAQ_35_2798.shtm

I want to edit the logrotate.conf file. They even have a listing in the article for an httpd log file.

```
-----  
"/var/log/httpd/access.log" /var/log/httpd/error.log {  
rotate 5  
mail www@xxxxxx  
size=100k  
shardscripts  
postrotate  
/sbin/killall -HUP httpd  
endscript  
}  
-----
```

Is the first line a typo? It makes reference to two different files. Also the log files in /var/log/httpd/ have an underscore between the name and log like access_log., error_log.
