Subject: Fedora 6 Advice

Good morning everyone,

I am seeking some advice on how to move forward with our plans to integrate Fedora 6 into our network. We are a small town ISP currently running in an all Windows network. Moving into this new year we are discovering that our costs to run this type of network is getting very costly. We are looking to move our entire services to Linux and preferably

Fedora. I have done a bit here and there with Fedora 5 and 6, however, not

to this large of scale. My question is how and where should I be looking to get a really good understanding of how to operate in Fedora 6? We are needing to setup a Fedora an email and web solution rather soon. I have read a number of tutorials, forums and even some published books, I just need a bit more. Any suggestions?

Thanks.

Derek M.
