Many thanks for your input...
on my todo list i have also these points
Architectural lighting/Lighting system adaptation
Complete line of conduit, floor duct and raceways
Power distribution
Installation of high-speed data systems
Emergency electrical power system
Sound systems
Security and fire alarm systems / Access control and CCTV
Branches+DR integration
Wide Area Network (WAN)
Local Area Network (LAN)
Integration of multiple network operating systems
Telephone systems

From my point of view you should have also a good air conditioning in the room.

15°C is a really good temperature for a server room.

Hope this helps.
