Anne wrote:

Sorry, I should have been more clear.

Basically I created a PAM policy to disable accounts after 5 unsuccessful logon attempts. Unfortunately, this included the ROOT account, which is causing major headaches.

Just wondered if I could exclude the ROOT account in this PAM policy from inheriting this disable policy?

pam\_listfile maybe?

Thanks

Anne

Hi all

Would someone be able to school me on how to exclude ROOT from my password policies? It's constantly getting disabled by the policy and of course I'm constantly having to hack it to get back in.

Thank you for your help.

Anne

Re: exclude user from password policy?

Errrrr....what?

What do you mean with your password policies? You mean that sort of things like password expiration, password minimum length and all that stuff?
