Hello Neelu,

Though I feel your issue is not related to Redhat list but firefox.

So a few Q

0. Can you tell the version of firefox.
1. Are ya dealing this issue with internet connection.
2. Is firefox running on Linux or grass. And finally
3. Did ya search

Tips:

firefox is unable to open https pages like yahoo.com and gmail.com with the following error.

Unexpected response from server

Firefox doesn't know how to communicate with the server.

* Check to make sure your system has the Personal Security Manager installed.

* This might be due to a non-standard configuration on the server.

what is solution .
