Your problem lies with the configuration of your domain within bind.

Please refer to <http://www.linuxjournal.com/node/1000079>

Technically, you can send email from any machine, but the larger email providers such as Yahoo or Hotmail now rely heavily on SPF records to make sure the sending domain has an SPF record. If email arrives from a machine that is not listed in the SPF record, then an MTA could classify you mail as spam.

A wizard exists for creating SPF records at <http://www.openspf.org/wizard.html?mydomain=&x=26&y=8>. We used this wizard to create an SPF record for example.org, and added it to our zone file:

```
example.org. TXT "v=spf1 a mx ~all"  
server1.example.org. TXT "v=spf1 a -all"
```

Subject: yahoo n hotmail not accepting mail from one domain

Dear ALL,

I dont know really if my problem is DNS problem or MTA problem

i have a redhat server 9 as my primary name server running the following

```
bind-9.2.1-9  
sendmail-8.12.5-7  
domain name = kmun.gov.kw  
ip address = xx.xx.xx.1  
mx record for kmun.gov.kw= xx.xx.xx.1
```

RE: yahoo n hotmail not accepting mail from one domain

RE: yahoo n hotmail not accepting mail from one domain

this server also host another domain baladia.gov.kw

i also have a secondary DNS running

bind-9.2.1-9
ip address = xx.xx.xx.2

all has been running perfectly well for long time

recently we decide to have a mail server for our other domain

baladia.gov.kw

installed sendmail (same version)on our secondary DNS server that is
xx.xx.xx.2 and set up a mx record

xx.xx.xx.2

and everythin is working fine..

i can send send mails from my new domain that is baladia.gov.kw and also all mail send to any
user@xxxxxxxxxxxxxxx is received perfectly OK

but i have found that whenever i send mail to yahoo or hotmail the mail gets delivered to junk mail folder and
not to inbox

but mails sent from my earlier domain kmun.gov.kw are delivered correctly to the inbox

both domain configs are the same n the zone files are correct and sendmail is configured likewise

aslo i have checked if the servers are in spam n infact they r not

so jus wondering why mails sent from my kmun.gov.kw get delivered to yahoo and hotmail correctly and
blaladia.gov.kw do NOT.

really appreciate you help

Thanks and regards

simon
