any one using DenyHost scripts
<http://denyhosts.sourceforge.net/>
please your input about this scripts, am in the process of implemening it on
my servers.

I would consider looking at pam_shield.

It has 2 important advantages, it works instantly from PAM (it doesn't
require scanning logfiles) and it null-routes source ip addresses (doesn't
change iptables rules).

It has a KISS design and works effectively.

Kind regards,
