Has anyone installed RHEL 5 on an older Dell PowerEdge 600SC? If so, were there any issues?

The 600SC was "certified" on RHEL 3. That would lead me to assume that it'll run RHEL 5 just fine, but YMMV, of course.

Hi all,

New on this list and to RHEL.

Is it generally assumed that new RHEL-releases are backwards compatible, and thus certified, on eg server-systems like this Dell mentioned?
