I think your looking for is the kernel-devel package. `up2date -i` kernel-devel or `yum install kernel-devel` should work just fine depending on which version of red hat you are using.

The sources will then be under the `/usr/src/` directory.

Does anyone know why there isn't yet a kernel-headers rpm package for RHEL5's x86_64 version?

Just wondering, because I seem to need it to get my test lab laptop's wireless card to work (via NDISWrapper).

Thanks.

Johan
