Hi, I'm trying to use sysstat on my RHEL4 box. I figured it would have been installed by default...however:

```
[root@secure ~]# which sysstat
/usr/bin/which: no sysstat in
(/usr/kerberos/sbin:/usr/kerberos/bin:/usr/local/sbin:/usr/local/bin:/sbin:/bin:/usr/sbin:/usr/bin:/usr/X11R6/bin:/root/bin)
[root@secure ~]# up2date --showall | grep sysstat
sysstat-5.0.5-15.0.1.el4.i386
[root@secure ~]# sysstat
-bash: sysstat: command not found
[root@secure ~]#
```

Why oh why?

- Brad

The sysstat utilities are a collection of performance monitoring tools for Linux. These include sar, sadf, mpstat, iostat, pidstat and sa tools
i dont think that sysstat is a binary.

also use locate | grep bin etc....
