Dear All,  
I am curently using REDHAT ES4 server as my mail and DNS and been workin fine ..  
im have no much experince  
the machine is p4 3.0 GHZ with one 120 gb IDE HDD  
i am planing to install a new HDD to mirror the existing one .  
appreciate if some one can tell me the steps or any good site which explain in deatail the steps  
of mirroring the HDD as a security i will do a backup b4 i do the actuall mirroring  
Thnaks and appreciate  
regards  
simon
