I'm running 256M RAM with 6.3. All patches. Does what it needs to do.
Never been hacked.

RH9?

Geez, my server is still at 6.3...

Yeah, well, I may upgrade to a box that a friend scored that was being
thrown out where he works. I can see that it's got more then 32M of
RAM...

Subject: I must be dense....

A few years ago, I set up the box that I use for a firewall/router,
running RH9, as my printserver. Well, earlier this year, I had a hard

drive crash, and had to rebuild the box. Now I'm trying to set it up
again for the same. I

must be dense, or going senile, but I have yet to figure it out. Do

RE: I must be dense....

RE: I must be dense....

I

- 1) use redhat-config-printer?
- 2) if so, do I tell it local printer, or Unix print server(lpd)?
- 3) if the former, how do I tell CUPS to use it, and advertise it to the other systems on my network, and to actually pass requests to it to be printed, rather than have them go to nowhere?
- 4) if the latter, do I tell it to use cups, or what?
