dear All,

I am jus installed centOS 5.0 from the distrubution to be as our mail server

i have installed the following

```
sendmail-8.13.8-2.el5
mailsacnner 4.61.7
spamassassin 3.2.1
clamav-0.91-1.el5.rf
```

and every thing is workin fine

but i want to implement domain keys so i downloaded the dkim-milter-1.2.0 and uncompress it edited the site.config.m4 file n folled intructions in the INSTALL file but when i run
sh Build
it gives me errors

here below a part of the errors

```
tmp/software/dkim-milter-1.2.0/libdkim

function)

dkim-filter.c:565: error: (Each undeclared identifier is reported only

once

dkim-filter.c:565: error: for each function it appears in

appreciate if someone can help me..

Got a little couch potato?

Check out fun summer activities for kids.

error with libmilter
