I am currently looking into installing Munin software in the next couple of months to monitor the 40 machines we have on-site but in the mean time could someone help with some relevant commands where I can find out the information below.

- Network card errors.
- Networker card traffic.
- Processes taking up all or allot of cpu.
- CPU – Temperature issues.
- CPU Usage.
- Load Average.
- Memory usage.

Any other commands you think are relevant would be great too.

Help on this would be much appreciated.
