how to allow active and passive ftp connection from my machine?

John O'Loughlin <j.oloughlin@xxxxxxxxxx> wrote:

You will also need to ensure that the firewall on ftp.domain.com allows for both active and passive ftp connections.

hi john,

thanks so much for replying. i really need your help.
i actually mess up this ftp server.

so vsftpd is installed. my machine name is server.domain.com (sample name).
i need our client to ftp to ftp.domain.com instead Not server.domain.

what can i do?

John O'Loughlin wrote:

I've used vsftpd which is good.

`rpm -q vsftpd` so see if its installed, if not `up2date vsftpd`

the config file is `/etc/vsftpd/vsftpd.conf`

`chkconfig` it on and `service vsftpd start`

Anonymous ftp stuff goes in `/var/ftp/pub`, I'm not sure if the default config allows users to their home directories or not.

Re: how to setup ftp server in red hat enterprise level 5

If you need any help let me know.
