You will also need to ensure that the firewall on ftp.domain.com allows for both active and passive ftp connections.

hi john,

thanks so much for replying. i really need your help.
i actually mess up this ftp server.

so vsftpd is installed. my machine name is server.domain.com (sample name).
i need our client to ftp to ftp.domain.com instead Not server.domain.

what can i do?

John O'Loughlin <j.oloughlin@xxxxxxxxxxx> wrote:

I've used vsftpd which is good.

rpm -q vsftpd so see if its installed, if not up2date vsftpd

the config file is /etc/vsftpd/vsftpd.conf

chkconfig it on and service vsftpd start

Anonymous ftp stuff goes in /var/ftp/pub, I'm not sure if the default config allows users to their home directories or not.

If you need any help let me know.

John
