hi all,

my apologies if this is a stupid question. this relates to a Red Hat Enterprise Linux Server 2.6.18-8.el5xen installation (i know bits and pieces about linux, but have much to still learn).

why, when i cat fstab, do i get this:

```
# cat /etc/fstab
...
...
/dev/VolGroup00/data1 /data1 ext3 defaults
1 2
/dev/VolGroup00/data2 /data2 ext2 defaults
1 2
...
...
```

but when doing df i get "mapper" included in the output.

```
# df -h
Filesystem Size Used Avail Use% Mounted on
/dev/mapper/VolGroup00-data1
473G 198M 449G 1% /data1
/dev/mapper/VolGroup00-data2
473G 70M 449G 1% /data2
...
```

i'd appreciate your insights.
