Johan Booyesen <<mailto:johan@xxxxxxxxxxxxxxxxxx>> scribbled on Monday, October 22, 2007 10:09 AM:

Not so sure about that, as I've noticed that CentOS seems to have more device support. Without going into specifics, I've managed to install CentOS a while ago in VMWare server using virtual scsi-drives that RHEL didn't cope with at the time. Dito for some physical machines.

Maybe CentOS has more user-centric repos available than RHEL does, which could account for more hw-support or something to that effect. I'm speculating heavily now though. 8-)

Give it a go though, it can't more than fail (it's free as well, so why hold back, after all it's a lab-machine right?), and in that case at least you'll know it doesn't work with CentOS and will have a reference for the future. Only because Oracle isn't certified for CentOS doesn't mean it won't run. 8-)

I don't think management over here will go for CentOS. Besides, if CentOS is the same as Red Hat, I assume that it too will not have the driver I need..?

Thanks for the suggestion, though!

Johan

Johan Booyesen <> scribbled on Friday, October 19, 2007 6:28 PM:

You should do fine with CentOS5 as a replacement for RHEL5. CentOS is binary compatible, a clone if you want, of RHEL. Only real difference (and the one I can care slightly about) is that CentOS has had all the

RE: Adaptec SCSI RAID 2000S

RHEL-logos etc stripped and that it uses yum for updating instead of RHEL's up2date and the RHN.

I use CentOS myself for trying out stuff before deploying to our RHEL3/4 machines. So far so good. I also like the fact that CentOS is supported as long as RHEL is. Redhat will support v5 until 2011?), and since CentOS is basically the same thing as RHEL, the same will be true for support and updates for CentOS.

See this thread on the CentOS forums, it might help you decide:

[http://www.centos.org/modules/newbb/viewtopic.php?topic\\_id=3107&forum=35](http://www.centos.org/modules/newbb/viewtopic.php?topic_id=3107&forum=35)  
. 8-)

[off-track]

I used Fedora before to try out stuff before, but thought the fast update-cycle was a bit too bleeding edge. I searched around a while and came across CentOS and haven't looked back since.

[on-track]

HTH.

Matt,

Good question, and a very valid point. But anyway, this box is kind of a test-lab Oracle server, and needs to be RHEL5 for that purpose. I believe it will be pretty heavily used, so virtualizing it won't happen – I'll bet my last penny on that, and on the Springboks, by the way! :)

I think the next thing to do is to perhaps flash the Adaptec adapter's

BIOS to a newer version, and then see if the driver will load...I'm pretty certain that I've exhausted all other options for now.

Will see what the boss says on Monday...

Thanks very much for your reply.

Johan

RE: Adaptec SCSI RAID 2000S

Perhaps this is not the answer you are looking for, but maybe you can install another distro (Fedora or an older CENTOS) to get driver support. Also, could using a virtual server work? I am just wondering if you can place something like CENT as the host OS then run VMWare and maybe

create a virtual machine with RHEL5? Perhaps this VM will not require

direct hardware support for the controller? You might be able to virtualize part of your infrastructure as well and run a legacy OS which supports your controller – then, include this box in the virtual

infrastructure.

Maybe the real question is why is it that you need to run RHEL5 on a 4

year old box? I am not saying there is a problem with it, but is it essential that REHL5 is run on this one?

Just some thoughts for you...

I hope you've already solved this problem. Have you checked the Adaptec web site for a Linux driver? If anyone has one, it would be the OEM.

Johan Booyesen wrote:

I urgently need advice on this: I need to install RHEL5 on a server that is probably about 4 years old. It contains an Adaptec SCSI RAID

RE: Adaptec SCSI RAID 2000S

2000S adapter, and there is no driver available that I can track down

on short notice (and none included on the RHEL5 discs).  
Anaconda  
does not detect any disks on the server during installation.

Anyone know what my best bet is to get around this, or where to find a driver that will work?

Thanks very much.
