Subject: Re: Samba problem

Quoting Steven Buehler <[steve@xxxxxxxxxxxx](mailto:steve@xxxxxxxxxxxx)>:

I have a samba server setup on RHEL AS 5. I can access it locally, but not from a remote server. I have even turned off the firewall altogether, but that didn't solve the problem. My samba is setup to allow from any host and not deny from any host. The errors that I get from

remote

hosts is connection timeout. I can connect by other means, ftp, ssh, etc from the other hosts, so at least I know that the physical server that

Samba

is on can be reached. I have tried connecting from windows servers and

from

Linux servers, but unless it is in my own local network of computers and servers here, I can't connect. The other Linux and windows servers are

all

in different states (so of course, different networks).

Any help would be appreciated  
Thanks  
Steve

||Is SELinux enabled?

RE: Samba problem

No it is turned off.
