I am trying to get my mailman config on a Fedora 7 box working after migrating the lists from my old Ubuntu server. Basically I installed the

<snip>

Please inform the webmaster for this site of this problem. Printing of traceback and other system information has been explicitly inhibited, but the webmaster can find this information in the Mailman error logs.

In the logs, I see:

```
[Tue Nov 27 11:01:37 2007] [error] [client 192.168.1.48] script not found or unable to stat:
/usr/lib/mailman/cgi-bin/mailman
[Tue Nov 27 11:01:44 2007] [error] [client 192.168.1.48] File does not exist:
/var/www/html/images/mailman, referer: http://192.168.1.46
/mailman/admin/homegroup
[Tue Nov 27 11:01:44 2007] [error] [client 192.168.1.48] File does not exist:
/var/www/html/images/mailman, referer: http://192.168.1.46
/mailman/admin/homegroup
[Tue Nov 27 11:01:44 2007] [error] [client 192.168.1.48] File does not exist:
/var/www/html/images/mailman, referer: http://192.168.1.46
/mailman/admin/homegroup
```

As these entries indicate, there is no /var/www/html/images/mailman. Is this supposed to be a file or directory? I see a /var/www/html/images/mailman.jpg.

Re: Migrating mailman lists from Ubuntu to Fedora 7

Hum. Looks like it wants a virtual host, with a DocumentRoot set to /usr/lib/mailman.
