- 

Hi All,

I am using ntp to synchronise time between 2 computers. In one computer I am observing the following log in the /var/log/messages.

```
Jan 17 00:49:56 chbsc301 ntpd[5940]: kernel time sync disabled 0041
Jan 17 00:50:59 chbsc301 ntpd[5940]: kernel time sync enabled 0001
Jan 17 00:54:32 chbsc301 ntpd[5940]: synchronized to 192.168.0.3,
stratum 13
Jan 17 01:00:09 chbsc301 crond(pam_unix)[9097]: session opened for user
root by (uid=0)
Jan 17 01:00:10 chbsc301 crond(pam_unix)[9097]: session closed for user
root
Jan 17 01:08:46 chbsc301 ntpd[5940]: time reset +17.656804 s
```

My doubt is in the last line in the above log, the time reset values is around +17.656804 seconds. Is this normal? Normally I see below 1 second as time reset.

Could some linux gurus, please clear my doubt.

Thanks,

Regds,  
Ravi R.S
