Last time I moved one I update at least 15 files.
Are any services bound to an address or are they all set to 0.0.0.0
Firewall rules need to updated if they are hard set.

Subject: How to change IP address

I need to change the IP address on several RHEL 4 machines.
Is it as simple as going into the
system-config-network gui and changing the IP address there?
Are there other files I need to edit and change? Should I
make the change prior to moving the machine to the new subnet
or after I move it?

Thanks.
Dave Martini
