Hi, Margaret,

Margaret Doll wrote:

I know I used to be able to write dvds from my RedHat system.

Have you upgraded, or made changes to the system?

mark

I used to use

```
growisofs -dvd-compat -speed=16 -Z /dev/hdb=Fedora-8-i386-DVD.iso
```

but I get the error message:

```
:( /dev/hdb: media is not recognized as recordable DVD: 0
```

I have tried using both imation dvd-r/16x and
Memorex dvd+r/16x

cdrecord -v speed=16 dev=/dev/hdb name.iso - works, so I know
that the device that I am using is correct.

```
cdrecord -scanbus
```

```
0,0,0 0) 'TSSTcorp' 'DVD-ROM TS-H352C' 'DE02' Removable CD-ROM  
0,1,0 1) 'HL-DT-ST' 'DVD+-RW GWA4164B' 'D108' Removable CD-ROM
```

```
uname -a - 2.6.9-67.0.1.ELsmp #1 SMP  
rpm -aq cdrecord - cdrecord-2.01.1-5
```
